

Analytics: Advanced Application Developer - LWC

Süre: 2 Days

What you will learn

This course is part of a comprehensive training program intended for members of Siebel Analytics implementation teams. The goal of the program is to enable participants to perform the tasks required to successfully complete a Siebel Analytics deployment.

This course is one of three advanced role-based Analytics courses. This course provides advanced training in topics related to the tasks performed by an Analytics Application Developer. It is intended for individuals on the implementation team whose major role is to build, modify, and administer Analytics requests and Intelligence Dashboards for Siebel Analytics. This course provides instructor-led training on advanced topics and concepts beyond those covered in the core course, Analytics: Application Developer (Siebel 7.7). The course presents material in two sections. In the Report Development section, students learn advanced techniques for developing and configuring Siebel Analytics requests and Intelligence Dashboards using Siebel Answers. In the Siebel Analytics Web Administration section, students learn post-installation configuration and administration procedures related to Siebel Answers, Siebel Delivers, Siebel Intelligence Dashboards, Siebel Analytics Web Catalog, and the Siebel Analytics Web user interface.

This course is appropriate for Analytics 7.7 and 7.8.

Live Virtual Class (LVC) Access Policy:

- You are prohibited from allowing other unregistered individuals to view your LVC Event
- You may not make unauthorized recordings, copies or transmissions of LVC Event content
- You must view the LVC Event from the country listed in your LVC Event registration

Students attending LVC events should enroll at least two working days in advance of the event to ensure adequate time to download student materials and confirm their system setup. To learn more about the system and setup requirements for participating in a Live Virtual Class, please [click here](#).

Audience

Functional Implementer
Technical Consultant

Prerequisites

Suggested Prerequisites

Analytics: Application Developer (Siebel 7.7)
Analytics: Overview (Siebel 7.7)

Course Objectives

To enable students to apply advanced techniques when creating, modifying, and administering Siebel Analytics requests

Course Topics

Creating and modifying requests in Siebel Answers

Filtering requests in Siebel Answers

Formatting results in Siebel Answers

Working with views in Siebel Answers

Showing results with pivot table views

Showing results with gauge views

Creating and modifying Intelligence Dashboards

Customizing the Siebel Analytics Web user interface

Administering Siebel Answers

Administering the Siebel Analytics Web Catalog
