Prerequisites	:	There are no prerequisites for this course.

About Training

About Training

This is a special practical course, composed of the combination of “Administrator” and “Expert” (CCSA+CCSE) trainings in the List of Check Point Trainings. Participants will not only learn security management systems of Check Point, gateway security systems and distributed platforms, and Check Point Software Blades systems but will also be able to examine the architectural structure of Check Point Security Gateway and Management systems in detail. At the end of this course, the participants will be able to debug at firewall operations and optimize Checkpoint VPN performance. The participants will also be capable to administer Check Point Software Blades in detail and have the knowledge and skills needed to analyze deeply any technical problem that might occur and to solve these problems.

What You'll Learn

Participants will examine the security management systems of Check Point, gateway security

systems and distributed platforms, as well as the structure of Check Point Software Blades in detail. At the end of this course, the participants will be able to debug at firewall operations and optimize Checkpoint VPN performance.
