|---------------|---|-------------------------------------------------|
| Training Time | : | 3 Days |
| Capacity | : | 12 |
| Prerequisites | : | There are no any prerequisites for this course. |

About Training

About Training

This training course aims at helping product managers, products owners, business analysts, system architects and developers understand how to efficiently Manage Requirements on the basis of the product vision till guiding developers accurately in implementing them.

More in detail, this course aims at assisting product managers in better defining the value propositions of their products on the basis of strategies and stakeholder needs.

Business Analysts and product owners understand how to describe requirements of the product backlog then discover appropriate epics and user stories of the system while contributing to the required value creation.

Along interactive case study exercises, participants learn how to describe in detail such requirements in order to validate correct understanding of needs and prepare system acceptance tests. Thus, only using a very common and productive UML profile, they learn to structure

requirements in order to communicate efficiently with architects and developers through an iterative requirement gathering process.

What You'll Learn

- Introduction
- How to describe the business vision and needs via traceable models ?
- How to describe user needs via agile use case modeling (epics and user stories) ?
- Validating and testing correct understanding of detailed specifications

Who Should Attend

- Product managers
- Products owners
- Business analysts
- System architects and developers
